

THE BLUE ANGELS

THE U.S. NAVY'S FLIGHT DEMONSTRATION SQUADRON

MCDONNELL - BOEING F/A-18-A "HORNET"

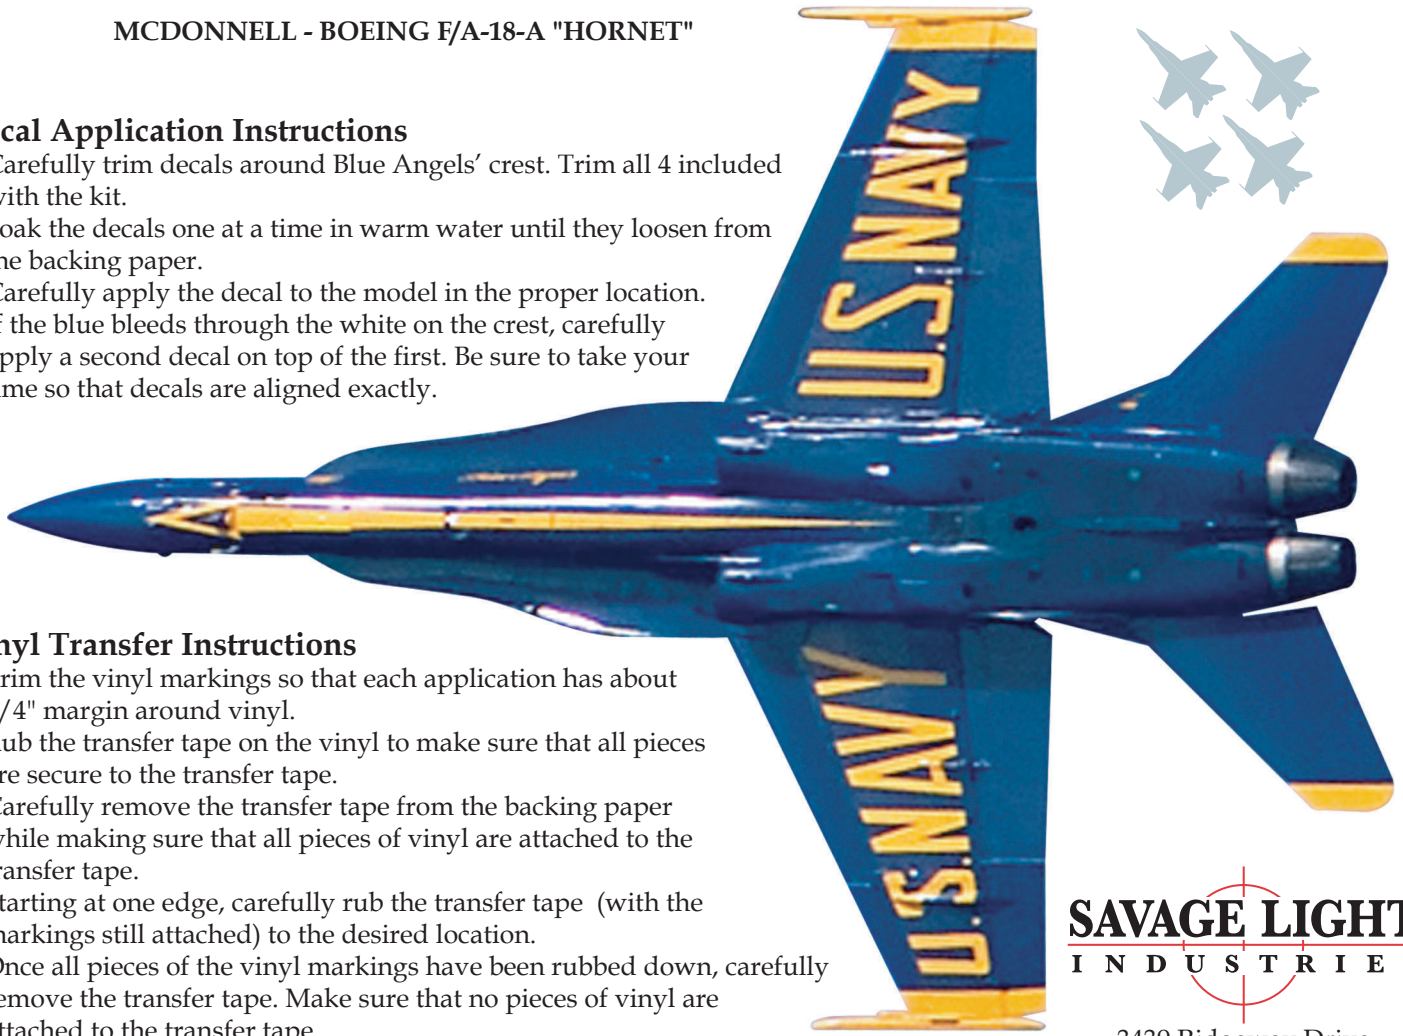

Decal Application Instructions

1. Carefully trim decals around Blue Angels' crest. Trim all 4 included with the kit.
2. Soak the decals one at a time in warm water until they loosen from the backing paper.
3. Carefully apply the decal to the model in the proper location.
4. If the blue bleeds through the white on the crest, carefully apply a second decal on top of the first. Be sure to take your time so that decals are aligned exactly.

Vinyl Transfer Instructions

1. Trim the vinyl markings so that each application has about 1/4" margin around vinyl.
2. Rub the transfer tape on the vinyl to make sure that all pieces are secure to the transfer tape.
3. Carefully remove the transfer tape from the backing paper while making sure that all pieces of vinyl are attached to the transfer tape.
4. Starting at one edge, carefully rub the transfer tape (with the markings still attached) to the desired location.
5. Once all pieces of the vinyl markings have been rubbed down, carefully remove the transfer tape. Make sure that no pieces of vinyl are attached to the transfer tape.
6. **Special Bottom Arrow Suggestion:** Trim the square ends of the arrow flush with the vinyl. After removing the transfer tape from the backing paper, use some window cleaner such as Windex to wet the back of transfer tape before applying the marking to the model. This will allow you to position the arrow correctly and to adjust as necessary. Allow the marking to dry overnight before removing the transfer tape.
